Dr. Christopher S. Campbell
Superintendent

Christopher P. Baker
CCTE Supervisor

Dear Dr. Blaisdell,

Please find this generous proposed donation request being offered to the transportation program at PSHS by COLOURS INC. (gocolours.com) store#035 with a value of \$22,186.03. This donation is a state of the art water based paint system (ENVIROBASE) which is currently being used in many high end automotive repair facilities. This system is a more environmentally friendly option and the direction that the automotive field is heading. It has always been our intention to always take the most environmentally responsible path in our program. Along with this donation of product and equipment would come with technical support as well as industry recognized training and certifications for students, staff and community partners. All training would be held at PSHS during shop time or after school. Receiving donations like this have allowed Plymouth Public Schools CCTE programs to better keep pace with current industry and prepare our students for the work place.

Technical support, training and industry recognized certifications to students, staff, and advisory board members is free of charge. At the end of each semester, currently enrolled students will be assessed during their shop time. Students who are absent, out of the building on co-op, or have conflicts will be assessed in the evening under the direct supervision of Mr. Baker. During this time students will only have access to the auto shop. Current staff as well as current automotive PSHS advisory board members could also get certified in an evening session. There are very few people that fall into that category.

Thank You.
Christopher Baker
